

Mr. Tang Kok Mun is the CEO of Biogenes Technologies Sdn. Bhd., a Malaysian-based company focusing on development and commercialisation of molecular diagnostic technologies for commercial use in human healthcare, animal healthcare, agriculture, aquaculture, food safety and pollution monitoring.

Biogenes collaborate with researchers from universities and research institutions to tap into their expertise and know-how to develop the appropriate technologies needed by the industries. Hence, Biogenes is always seeking opportunity to engage and collaborate with research expertise both from within Malaysia, as well as regional and international level.

Mr Tang have over 15+ years of experience in bringing technologies from R&D stage to commercial markets. Some of his earlier startups and projects are in tech areas such as real-time water treatment monitoring system, biomass utilization for renewable energy and chemicals, as well as genomics in aquaculture.

Mr. Tang majors in Chemical Engineering and Master in Business Administration from University of Malaya, as well as having graduated from Stanford University Center of Professional Development in Entrepreneurship.
